VIKNESH GS

QA Automation Engineer | SDET | Selenium, Playwright, API Testing

Chennai, India | +91 9150642692 | vikneshgs2002@gmail.com | linkedin.com/in/gs-viknesh | github.com/vikneshgs23

PROFESSIONAL SUMMARY

QA Engineer with 1 year of manual testing experience on web and mobile applications and hands-on test automation in **Selenium (Java)** and **Playwright (JavaScript)**, with REST API testing in **Postman** and **Newman** and CI pipelines on **GitHub Actions**. Built Page Object Model frameworks with cross-browser runs and reporting. ISTQB CTFL certified. Seeking QA Automation Engineer / SDET roles.

TECHNICAL SKILLS

Test Automation:	Selenium WebDriver, TestNG, Playwright, Page Object Model (POM), Extent Reports, Test Automation Framework Design
API Testing:	Postman, Newman (HTML reports), REST API testing, REST Assured
Programming:	Core Java, JavaScript, SQL
Tools and CI/CD:	GitHub Actions (CI pipelines), GitHub Pages (live reports), Maven, Git, GitHub, Jira
Manual Testing:	Functional, Regression, Integration, Smoke, Sanity, Cross-Browser, Cross-Platform Testing; Test Case Design; Traceability Matrix
Process:	SDLC, STLC, Defect Life Cycle, Bug Reporting, Agile

PROJECTS

Selenium Test Automation Framework | SauceDemo (Swag Labs) | Java, Selenium WebDriver, TestNG, Maven, GitHub Actions

GitHub: github.com/vikneshgs23/saucedemo-selenium-testng-framework

- Built a UI automation framework in Java 17 with Selenium WebDriver 4, TestNG, and Maven, using the Page Object Model across base, pages, tests, and utils layers.
- Implemented reusable components: cross-browser WebDriver setup and teardown, explicit wait helpers, config.properties-driven settings, Extent Reports, failure screenshots, and a TestNG listener.
- Covered login, negative, and end-to-end scenarios through a testng.xml suite; set up a GitHub Actions pipeline running headless Chrome on Ubuntu. The README shows a live last-run report.

Playwright E2E Test Automation Framework | SauceDemo (Swag Labs) | JavaScript, Playwright, GitHub Actions

GitHub: github.com/vikneshgs23/playwright-swaglabs-js

- Built an end-to-end framework in JavaScript with Playwright Test using the Page Object Model (Login, Inventory, Cart, Checkout), JSON test data, and reusable helpers; covers login, negative, and end-to-end cases.
- Configured parallel cross-browser execution on Chromium, Firefox, and WebKit; enabled full-page screenshots and execution traces on failures and retries for faster debugging.
- Set up GitHub Actions CI to run the suite on every push and pull request and publish the HTML report as an artifact; the README shows a live last-run report.

API Testing Portfolio | Restful Booker API | Postman, Newman, REST Assured, GitHub Pages

GitHub: github.com/vikneshgs23/api-automation-portfolio

- Designed a 34-case API test case sheet for the Restful Booker API and executed all 34 in Postman using a shared collection and environment, both versioned in the repo.
- Found and documented validation defects in POST /booking; generated Newman HTML reports and published the live report on GitHub Pages.
- Setting up a REST Assured + TestNG (Maven) suite in the same repo to automate the API tests (in progress).

EXPERIENCE AND TRAINING

Automation Testing Training | QSpiders (Certificate awarded) | Sep 2024 - Nov 2025

- Completed structured automation testing training in Java, Selenium WebDriver, and TestNG.
- Built a Java, Selenium WebDriver, and TestNG automation framework of 15 test cases for Trello, covering functional and regression scenarios.
- Wrote test scenarios, test cases, and defect reports; applied SDLC and STLC practices across hands-on projects.

Manual Software Tester | Emblock Tech (Early-Stage Startup) | Chennai, India | Aug 2023 - Jul 2024

- Tested 3-4 web and mobile application projects end to end, covering UI, functional, regression, integration, cross-browser, and cross-platform scenarios against business requirements and user stories.
- Designed, executed, and maintained test cases and requirement traceability matrices to track coverage per project.
- Logged, retested, and closed defects in Jira through the defect life cycle, working directly with developers.

CERTIFICATIONS AND LEARNING

- **ISTQB Certified Tester Foundation Level (CTFL)** | Indian Testing Board | 29 Sep 2026 | ITB-CTFL-157297
- **Cybersecurity and AI Course** | IGMPI | Jan 2026 - Present | Security and AI fundamentals for testing

EDUCATION AND ADDITIONAL INFORMATION

B.E. in Electrical and Electronics Engineering | St. Joseph's College of Engineering, Chennai | 2023

Joint Secretary, IEEE RAS (undergraduate) | Languages: English (fluent), Tamil (fluent)
